Table of Contents

*The idea of module "**Paypal instant checkout**" is creating a totally fast and easy checkout process with Paypal payment method. Customer instead of following several default steps (such as: add products to basket, go to checkout page, fill in information, choose delivery or payment method etc.) now just by one click in product detail page or in checkout page and then the checkout process is done. All information will be filled in automatically based on Paypal account.*
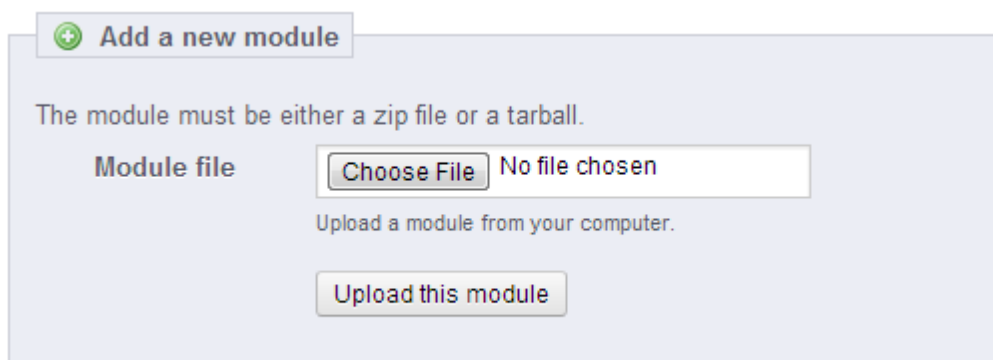

# 1   Install module

➢ In the Back Office, go to Modules

➢ Click on **Add new modules** in the upper right hand side

➢ In Add new module page, click "**Browse**" button and locate the "**paypalinstantcheckout.zip**" file in the download package from us.
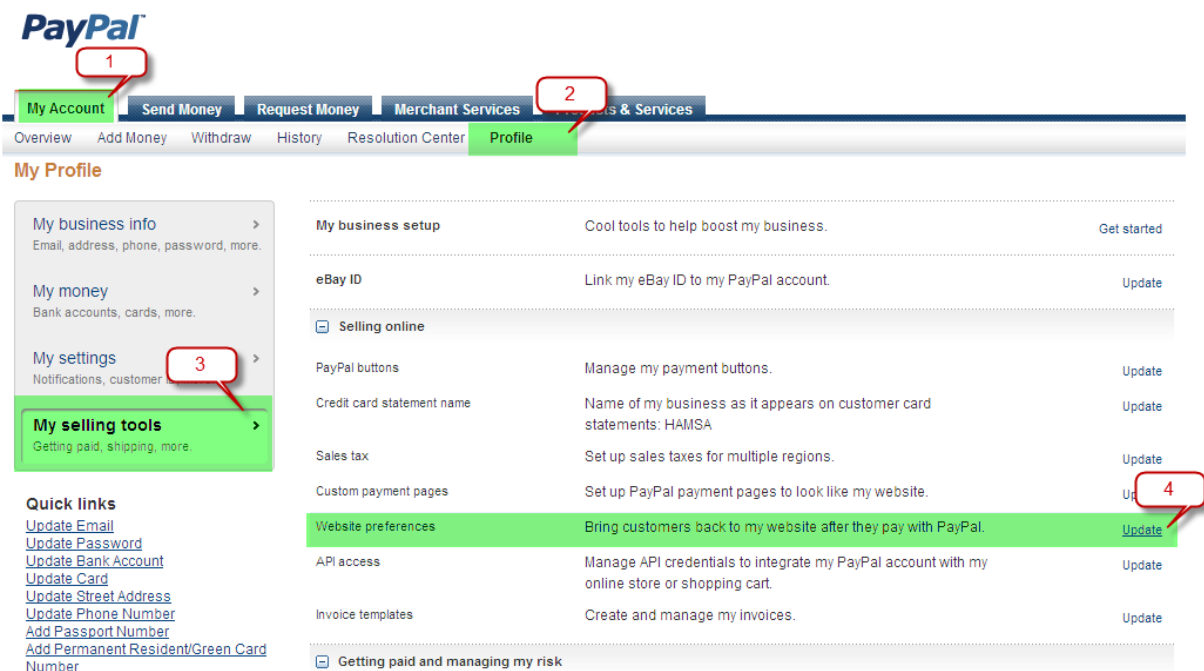

➢ Click on "**Upload this module**" button.

➢ In the "**Modules**" tab, search for "**Paypal Instant Checkout**" to locate to the module. Click "**Install**"

2 Paypal configuration

Before configuring module, firstly you have to configure the third-party service – Paypal.

➢ Go to www.paypal.com and login Paypal. Make sure you already registered a Paypal account.

➢ In tab "**My account**" (1), please go to "**Profile**" link (2). In the left menu, you will see a section named "**My selling tools**" (3), please click in that service. You will see a screenshot as picture below.

➢ In "**Selling online**" part, find "**Website preferences**" and click to link "**Update**" (4). You will see the page as screenshot below.

Encrypted Website Payments

Using encryption enhances the security of website payments by decreasing the possibility that a 3rd party could manipulate the data in your button code. If you plan on only using encrypted buttons you can block payments from non-encrypted ones.

Learn more about Encrypted Website Payments

Note: If you enable Encrypted Website Payments, all of your Buy Now, Donations, and Subscriptions buttons **must** be encrypted via one of the following methods:

- Using the Button Factory with the security settings enabled.

- Using your own code, you encrypt all website payments before sending them to PayPal.

By enabling this feature, any Buy Now, Donation, or Subscription button that is not encrypted will be rejected by PayPal.

Block Non-encrypted Website Payment: ○ On
   ⦿ Off

Express Checkout Settings

With this setting you determine if you technically support the German funding methods giropay and bank transfer in your Express Checkout implementation.
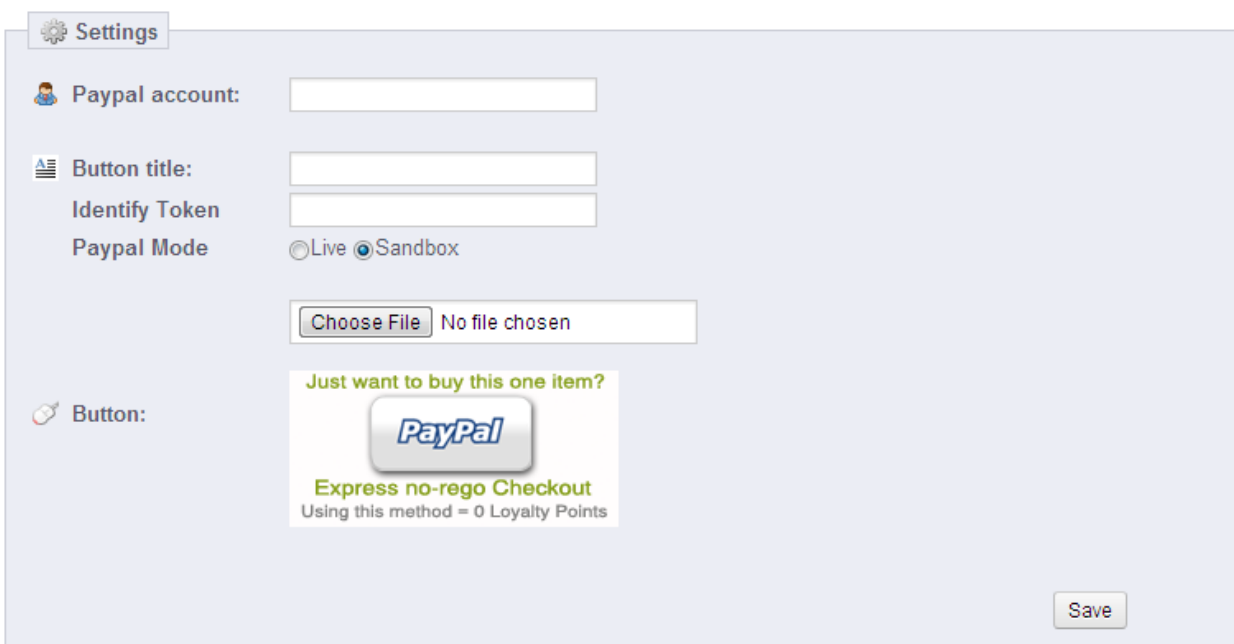

Support giropay and bank transfer payments: ○ Yes
   ⦿ No

➢ **Identify Token**: The Paypal token in step (4) of Paypal configuration.

➢ **Paypal mode**: choose "**Live**", note that"Sandbox" is for testing only

➢ Click "**Save**" button

4   Front-end

After done installing, the button "Paypal" will be added in two pages: Product detail and checkout so that customer can purchase product(s) instantly.

4.1   Check out with product page

In this page, a Paypal button will be added right behind "**Add to cart**" button. If customer clicks in this button, he/she can checkout this product right away without passing any default steps of Prestashop.

4.2 Check out within Cart summary

In checkout page, button "**checkout with Paypal**" will be added under basket summary part like screenshot below. This will allow customer to checkout all products in basket instantly by using Paypal account. This feature works well on one step checkout as well as five steps checkout flow.
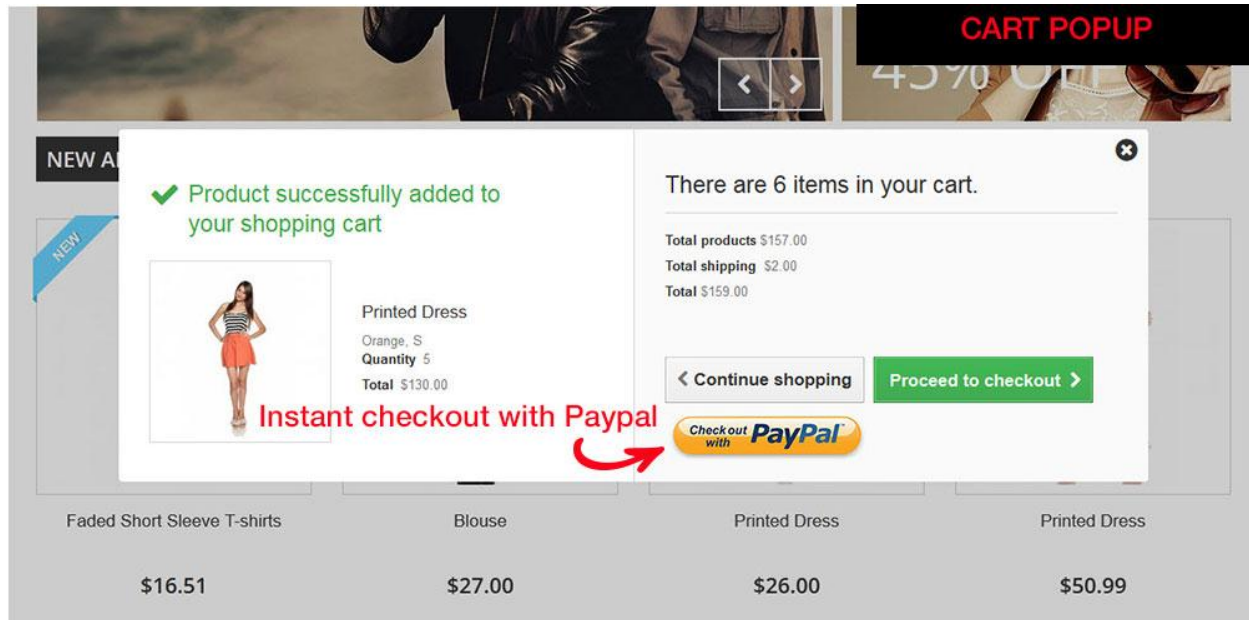

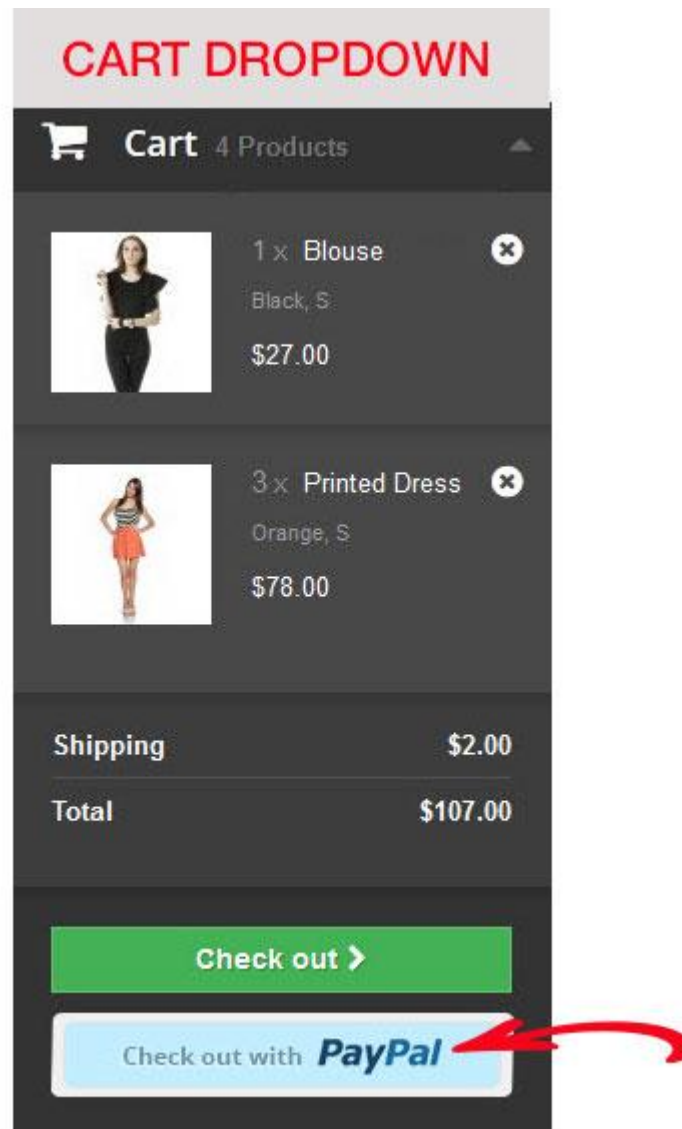

4.3   Check out from basket preview (Ps1.6.x)

Right after your customers add a product to basket, they are offered a chance to complete the order immediately with Paypal Instant Checkout. No need to redirect to basket summary. Just click and pay.

4.4 Check out from cart block (header)

Like Check out from basket preview, your customers are always be able to complete the order in 1 click, thanks to Paypal Instant Checkout.

4.5 Paypal checkout process

After clicking on button "Checkout with Paypal" in product detail page or checkout page, customer will be redirected to Order summary page of Paypal instead of going through all default checkout steps of Prestashop. In there, he/she can view the summary information of product he/she will buy and a form to enter his Paypal account.

Once he/she finishes login to their account, a page with customer information will be shown so that he/she can change his address as well as other information if needed.

When customer clicks on button "**Pay Now**", the checkout process is finished and he/she will be redirected to thankyou page on Paypal.

After 10 seconds, the system will automatically redirect customer to main shop to confirm address for the order.

At this step, if customer is not logged in yet, an account will be created based on his Paypal information. Since in Paypal account, phone number is not required as in Prestashop, he is

requested to fill in this information. Of course, he can change any information in this form. Clicking in button "**Finished**" and the whole checkout process is done. It is totally fast and easy process.

4.6   How Paypal fee works

Any Paypal transction by default includes Paypal fee.

Usually, it costs 4.4% of the transaction, plus 0.3$ fixed amount. Also, by default, this should be deducted directly from recipient's account. With Paypal Instant Checkout, it's never been easier to set up the fee and charge from your customers (if you want, of course).

In Paypal Instant Checkout, or you will use Paypal API and calculate the cost on fly; or you just set a fixed amount and a fixed rate on your own.
